

During the last two years there have been a number of significant improvements made to the Wichita Bedford site.

The exterior of the factory got two new coats of paint – that’s a lot of walls to cover!

The windows and doors were also all replaced.

The conveniences were all redesigned and fully redecorated (hurray!)

A brand new Energy Efficient heating system was installed at a cost of £170,000.

A brighter, more spacious canteen area was created at the front of the factory.

And last but not least, the ‘temporary’ cabins were demolished and removed, clearing lots of new space for car parking and letting more light into the offices.
